SUNSTAR Diabetes Campaign

Diabetes is a growing epidemic that needs all of our attention. Being strongly focused on helping people live healthier lives by ensuring excellence in oral health, SUNSTAR developed a toolkit to raise the awareness about the bi-directional link between oral health and diabetes and to provide guidelines for its prevention and better management. The toolkit contains separate types of information for 4 different targets: patients, oral care professionals, pharmacists and physicians. Please contact us if you would like to receive the complete toolkit.

DID YOU KNOW

Diabetes and periodontitis impact each other’s onset, course and outcomes. Periodontitis interacts with diabetes in ways which impact individuals with diabetes at all stages of their disease, from early glycemic control, to complications and death.

DIABETES increases the prevalence and severity of periodontitis, particularly when a patient has poor glycemic control.

People with diabetes have a higher prevalence of periodontitis than the general population¹ – Type 2 diabetes is a risk factor for periodontitis²

Individuals with diabetes are up to 3 times more likely to suffer from periodontitis than people without diabetes¹

PATIENTS WITH PERIODONTITIS & DIABETES are impacted far worse

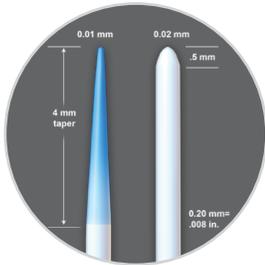

- Periodontitis adversely effects glycemic control and increases the risk of diabetic complication¹
- Makes it harder to achieve glycemic control¹
- Increases the risk of cardiovascular complications¹
- Increases the mortality risk up to 8 times in people with severe periodontitis³

Good Gum Health Starts with a Clean Sulcus

Extremely Tapered Bristles (ETB)

Precision tapering enables the Extremely Tapered Bristles (ETB) to penetrate more deeply to clean up to 2.75 mm into the sulcus and clean up to 9.63 mm along the gingival margin and between the teeth.¹ The upper 4 mm of the bristle is tapered to a rounded 0.01 mm end. Ordinary, rounded bristles have less than 0.5 mm tapered to 0.02 mm.

Available on: *Deep Clean Technique*®

Bristle Detail

Extremely Tapered Bristles (ETB)
30x magnification

Beneath the Sulcus

2.7 mm into the sulcus¹

Between the teeth**

1.4 cm interproximal¹

Quad-Grip® Thumb Pad

The Quad-Grip® handle was designed to guide the hand to hold the brush at 45° in all quadrants so the bristles are properly positioned at the sulcus for optimal subgingival cleaning.

The Quad-Grip® handle promotes the modified Bass technique.

Available on: *All Technique*® Toothbrushes

Dome Trim® Bristle Design

Dome Trim® bristles are clinically designed to clean below the gumline^{2,3} where periodontal disease starts. The dome shape bristling structure helps promote the recommended 45° angle when using the modified Bass technique.

Available on: *Complete Care Technique*®, *Sensitive Care Technique*®, *Technique*® Classic, *Super Tip*®, *Dome Trim*®, *G·U·M Bright Care*™

* DOF-0042

STIMULATOR
Handle & Refills

- Rubber tip stimulator for gingival massage and interproximal cleaning
- Slender angled neck for easy maneuverability around arches

600 Handle	1 dozen
600A Refills	3 dozen/box

2-in-1 TONGUE CLEANER

- Two rows of bristles reach into tiny grooves on the tongue's surface to dislodge bacteria and food particles
- Two rows of serrated scrapers gently remove bacteria and food particles while cleaning the tongue's surface
- Narrow head reduces gag reflex

Up to 50% of bad breath comes from residues on the tongue.
75% of bad breath compounds are removed by tongue cleaning.*

*Pedrazzi V, et al. Tongue - Cleaning methods: a comparative clinical trial employing a toothbrush and a tongue scraper. J Periodontol 2004 Jul; 75: 1009-1012.
